ReZcare is a suite of integrated software applications and hardware systems which are connected and monitored.

Systems Monitored

ReZcare integrates critical life safety systems such as nurse call, wandering resident, access control and fire panels.

When a system goes into alarm, notification is sent to staff on a handheld device and the nurse's station. Time, location, and other information from each event is recorded in ReZcare for reporting purposes.

All integrated systems are monitored by ReZcare. Staff are notified if a system fails to report, so action can be taken to ensure proper operation of each integrated life safety system.

ReZcare Wireless provides a complete, safe, and reliable system for residents to call for assistance at any time, no matter where they are located in the facility.

ReZcare provides a safe and reliable system for residents to call for assistance from anywhere in the facility using a lightweight, wearable pendant or strategically located wall switches.

Resident calls for aid are sent to staff using a handheld device such as a radio, iOS or Android device. Wireless dome lights can also signal a call location if requested.

ReZcare records the time, location and response time associated with each call for aid, providing useful information for the management team.

Manufactured by Tek-Tone, Tek-CARE is an option for providers seeking a wired nurse call system.

There are three models from which to choose. Standard among them is a compact and sleek master station that can be wall or desk mounted. It features an LCD screen that displays calls for aid in order of priority. Call stations for each system are in resident rooms and bathrooms.

SMD representative assists providers in determining the right system based on such factors as the need for two-way voice communication.

Option for Reporting Capabilities

If you operate in a state which requires documented response times, you can opt to add the reporting capabilities of ReZcare to your system. By adding the ReZcare interface, you can also send messages from your Tek-Tone system to radios and other handheld devices.

SigmaGard®

SigmaGard Wandering Resident System

SigmaGard Wandering Resident Systems are designed to prevent residents who are at risk for wandering from leaving a building without compromising their dignity.

SigmaGard is a system of choice because it offers several programming features, and its design is flexible.

SigmaGard identifies the resident at risk for elopement at the door in alarm and at the nurse's station as a standard feature. If ReZcare is installed, door alarms can also be sent to a mobile device such as a hand-held radio.

SigmaGard systems can be created with three types of components, so providers can build a system based on their resident population, physical plant, and budget. Further, exterior keypads and push buttons can be interfaced with SigmaGard's door locking units to enhance a facility-wide access control system.

Door and Building Security

SMD works with several manufacturers to create customized systems that optimize resident, staff, and visitor safety. SMD's product portfolio includes video surveillance systems, video intercoms, FOB readers, keypads, electromagnetic locks, and wireless /keyless locks.

Customers can enhance security by selecting the best locks for individual doors, or they can choose to work with SMD to build an access control system. ReZcare Access Control integrates door security. When a door is breached or is left propped open staff are alerted on a handheld device, and the event is recorded for reporting purposes.

- Dome Cameras
- Digital Video Recorder (DVR)
- Network Video Recorder (NVR)
- View live feed or recorded footage from your web browser, your iOS or Android device, or any windows based computer using a free software download.

Thermal Imaging

Accurate and Efficient Body Temperature Screening

Temperature screening can be monitored by personnel who control entry from designated laptop. An alternative is to install a temperature screening terminal that also executes the COVID survey. Based on the outcome of both, a badge is printed, and a person gains entry into the building.

Safe Patient Handling Products

Vancare offers a full selection of mobile floor lifts, including total body, sit to stand and bariatric lifts. Each is designed to transfer residents of different sizes, from different positions in tight or spacious quarters. VANCARE mobile floor lifts feature a heavy-duty frame with an expandable base to be tip resistant. For providers offering bariatric care, the VANCARE 1000 is designed for people weighing up to 1000 pounds.

A built-in VANDERSCALE is available on 11 models and is within easy reach of the caregiver. Caregivers appreciate that the built-in scale doesn't interfere with lifting height as hanging scales often do.

Ceiling Lifts

VANCARE also offers a selection of ceiling lifts. Choose from portable lifts, fixed lifts, or track systems. Wall mount systems are available and often of interest by healthcare providers as well as individual homeowners due to the ease of installation. Maximum weight capacity among ceiling lifts ranges from 300 to 1000 pounds.
