ReZcare is a suite of integrated software applications and hardware systems which are connected and monitored.

ReZcare Features Benefit Residents, Staff and Administration

Residents benefit from an enhanced sense of safety and comfort. Residents can request assistance using wireless pendants, bedside call buttons, and pull cords. ReZcare's daily check-in feature and scheduled caregiver visits also ensure a resident their well-being is your priority.

Caregiving Staff are notified of a call for aid within seconds of a resident activating the call. When additional support is needed, ReZcare provides a means for staff to communicate with co-workers so they don't have to leave the resident's side.

Administrators and managers benefit from ReZcare's powerful reporting engine which delivers scheduled activity reports to selected personnel, and provides easy-to-use tools for reviewing historic system activity.

How It Works!

ReZcare is a centralized, automated system that provides an integrated view of resident care for nurse call, wandering patient and building security.

The ReZcare software application resides on a computer installed in the facility. Each life safety system compatible for integration is connected to the computer where its activity is constantly monitored, and associated wireless devices are supervised by the software. In the event of any activity, such as a pendant press or wander event, the software sees the activity, determines the location and resident(s) involved, and then notifies caregivers of the situation. Caregivers can receive notifications on a number of devices including radios, iOs, and Android devices. The caregiver responds to the appropriate location and works to resolve the problem. Throughout the entire cycle, all of the activity is logged in the software for future reporting purposes.

ReZcare monitors and reports on

- Wireless nurse call (ReZcare Wireless)
- Hardwired nurse call systems
- Wandering Resident/Elopement Prevention Systems
- Door and Building Security Systems

Demo Place
Group Average Summary Report (05/08/2016 - 05/08/2016)

Statistics
Total Events: 435
Total Devices: 1

Activity Group	Date	Shift	Event Count	Average Response Time
Other	05/08/2016	11PM - 7AM	1	00:01:20
Other	05/08/2016	3PM - 11PM	2	00:01:34
Other	05/08/2016	7AM - 3PM	8	00:02:09
Other	05/08/2016	All	9	00:01:58
Other	05/08/2016	7AM - 3PM	5	00:01:11
Other	05/08/2016	All	5	00:01:11

ReZcare Features

- Records all activity from all systems centrally
- Active Events from all integrated systems are displayed and communicated through same devices
- Provides Visual and Auditory notification options for caregivers and administrators
- Collates data from every event to create valuable management reports
- Monitors device functionality - alerts staff if a device needs attention
- Generates reports for delivery on a regular schedule or ad hoc basis

ReZcare Systems Are Customized

The Process

Each system includes a computer, network coordinator and EarlyResponse Software.

Select Resident Centered Devices That Initiate A Call for Aid

- Monitor Sensors
- Pendants
- Pull Cords
- Bedside Stations
- Tabletop Box

Selecting Hand-Held Communication Devices for Staff

- Radios
- ISO or Android Devices

Select Visual Display of Events (Calls for Aid, Doors in Alarm, Etc.)

- ReZcare Status - floor plan display on designated computer
- Dome Lights - placed outside resident complement pendants and switches to alert staff to the location of a resident in need

Select Systems to be Monitored

- Fire/Smoke/CO2
- Wandering Resident
- Door and Building Security
- Hard Wired Nurse Call
- Environmental Systems: Temperature Monitoring, Water Detection, Sanitation Systems

Determine What Information You Expect to Gather from Your System and the Frequency of Reporting

- Broad summary from all systems monitored
- Detailed reports that can be run routinely or on demand
- Report that detail frequency of calls for aid by location or by a particular resident

SMD Offers Local Sales and Local Service

Each system is built with on-site support from a representative who will guide your decision-making process, informing you of options in each step with careful attention to your budget.

SMD's technical team will install your system to specification and staff will be trained by your representative when you are ready to go live. Trouble shooting over the life of your system can often be accomplished remotely which means a quicker response.

ReZcare

ReZcare Wireless is a nurse call system for nursing homes, assisted living and retirement communities. This innovative system utilizes a full complement of wireless devices including radios, as well as iOS and Android devices to communicate residents' calls for aide.

Features

Wireless and Hardwire Inputs	ReZcare wireless operates with ReZcare EarlyResponse software. It operates as a stand-alone system, or it can be integrated with existing life safety systems.
Notifications	Alarm messages are instantly sent to all notification devices chosen for the provider's unique, customized system.
Reporting	Data is collected on each event and stored for reporting.
Data Backup	ReZcare EarlyResponse features scheduled data backups.
System Monitoring	The system monitors wireless devices for operation and battery level. Notification is provided to staff if an issue occurs.
User-friendly	The system is designed for easy operation and offers guidance for each function. Staff is also offered training upon completed installation.
Installation	ReZcare is installed by experienced technicians. Trouble shooting can often be offered remotely to optimize response time.
